

Colloquium

Multi-scale fluorescence imaging

Prof. Chieh-Han Lu (呂杰翰)

Department of Physics, National Taiwan Normal University

Date: 2025/05/06(Tue)

Venue: S4-625

Time: 14:00-16:00

Abstract :

Fluorescence imaging is a fundamental tool in modern molecular cell biology. This presentation will outline the basic principles of advanced fluorescence techniques, including single-molecule localization and light-sheet microscopy. It will demonstrate the applications of these microscopy tools across various biological phenomena of different scales, from molecular inter-organelle trafficking to the localization of neurotransmitters in a fruit fly's brain. The audience will gain insight into contemporary developments in microscopy and learn how physicists can apply their expertise to current research in molecular biology.
